DETAILED ACTION

This Office Action is in response to the Appeal Brief filed on May 27, 2005.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin Jackson on August 29, 2005.

The application has been amended as follows:

This application is in condition for allowance except for the presence of claims 16-20 non-elected. Accordingly, claims 16-20 have been cancelled.

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art references, alone or in combination, do not show a high frequency integrated circuit comprising a first silicon controlled rectifier device formed in a second active region, the first silicon controlled rectifier device comprising a first well region of the first

conductivity type formed in a first semiconductor layer, a first doped region of the first conductivity type formed in the first well region, the buried layer, a second well region of the first conductivity type formed in the first semiconductor layer and spaced apart from the first well region, and a second doped region of the second conductivity type formed in the second well region; and a second silicon controlled rectifier device comprising the second well region, a third doped region of the first conductivity type formed in the second well region, the buried layer, the first well region, and a fourth doped region of the second conductivity type formed in the first well region. As stated in the applicant's arguments, the prior art references lack the proper motivation for combining since Mori and Wang teach different types of semiconductor devices, one being a MOS type and the other being a bipolar device. Furthermore, the buried layer of separated buried layer of Mori does not complete the device of Wang. The applicant's invention calls for a buried layer used in both SCR devices while a separate buried layer of Mori is used in each SCR.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
